THE APPLICATION IDENTIFIED ABOVE HAS BEEN EXAMINED AND IS ALLOWED FOR ISSUANCE AS A PATENT. PROSECUTION ON THE MERITS IS CLOSED. THIS NOTICE OF ALLOWANCE IS NOT A GRANT OF PATENT RIGHTS. THIS APPLICATION IS SUBJECT TO WITHDRAWAL FROM ISSUE AT THE INITIATIVE OF THE OFFICE OR UPON PETITION BY THE APPLICANT. SEE 37 CFR 1.313 AND MPEP 1308.

THE ISSUE FEE AND PUBLICATION FEE (IF REQUIRED) MUST BE PAID WITHIN THREE MONTHS FROM THE MAILING DATE OF THIS NOTICE OR THIS APPLICATION SHALL BE REGARDED AS ABANDONED. THIS STATUTORY PERIOD CANNOT BE EXTENDED. SEE 35 U.S.C. 151. THE ISSUE FEE DUE INDICATED ABOVE DOES NOT REFLECT A CREDIT FOR ANY PREVIOUSLY PAID ISSUE FEE IN THIS APPLICATION. IF AN ISSUE FEE HAS PREVIOUSLY BEEN PAID IN THIS APPLICATION (AS SHOWN ABOVE), THE RETURN OF PART B OF THIS FORM WILL BE CONSIDERED A REQUEST TO REAPPLY THE PREVIOUSLY PAID ISSUE FEE TOWARD THE ISSUE FEE NOW DUE.

HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

If the SMALL ENTITY is shown as NO:

A. Pay TOTAL FEE(S) DUE shown above, or

B. If applicant claimed SMALL ENTITY status before, or is now claiming SMALL ENTITY status, check box 5a on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and 1/2 the ISSUE FEE shown above.

II. PART B - FEE(S) TRANSMITTAL, or its equivalent, must be completed and returned to the United States Patent and Trademark Office (USPTO) with your ISSUE FEE and PUBLICATION FEE (if required). If you are charging the fee(s) to your deposit account, section "4b" of Part B - Fee(s) Transmittal should be completed and an extra copy of the form should be submitted. If an equivalent of Part B is filed, a request to reapply a previously paid issue fee must be clearly made, and delays in processing may occur due to the difficulty in recognizing the paper as an equivalent of Part B.

III. All communications regarding this application must give the application number. Please direct all communications prior to issuance to Mail Stop ISSUE FEE unless advised to the contrary.

IMPORTANT REMINDER: Utility patents issuing on applications filed on or after Dec. 12, 1980 may require payment of maintenance fees. It is patentee's responsibility to ensure timely payment of maintenance fees when due.

EXAMINER'S STATEMENT OF REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance:

Claims 1-4 and 6-14 are allowable over the prior art, since the prior art fails to teach or fairly suggest a reaction system comprising a first reactant supply, a first supply valve, a solvent supply, a reaction module, an output valve coupled to a product collector and a controller connected to the first reactant supply, to the first supply valve and to the product collector, the controller being configured for controlling the first reactant supply and the first supply valve to introduce each reactant required to produce chemical products in a desired order, and for controlling the solvent supply to flush the reactor such that a fluid discharged from the reaction module alternates between one of the different desired chemical products and the solvent containing any residual chemical product, as recited in claim 1.

Claims 15-19 are allowable over the prior art, since the prior art fails to teach or fairly suggest a reaction system comprising a first fluid supply, a second fluid supply, a reactor, a solvent supply, a fluid collector, a spent solvent reservoir and a controller connected to the first fluid supply, to the second fluid supply, to the solvent supply, to the reactor, to the spent solvent reservoir and to the fluid collector, the controller being configured for controlling the system such as to introduce each reactant required to produce chemical products in a desired order and for controlling the solvent supply to flush the reactor such that a fluid

discharged from the reaction module comprises either one of the different desired chemical products, or the solvent containing any residual chemical product, as recited in claim 15.

The prior art fails to teach or fairly suggest a reaction system comprising a first reactant supply, a first supply valve, a reaction module, an output valve coupled to a product collector, an automated detector disposed between the output valve and the reaction module, and a controller connected to the first reactant supply, to the first supply valve, to the reaction module and to the product collector, the controller being configured for controlling the first supply valve to select the first desired reactant, for controlling the output valve to select a product chamber into which the product is directed, and for responding to the signal from the detector to actuate the output valve such as to selectively couple the reaction module to the product collector and to a spent solvent reservoir; as recited in claim 28.

The prior art fails to teach or fairly suggest a reaction system comprising a reactor, a first reactant delivery structure, a solvent delivery structure and a controller connected to the first reactant delivery structure and to the solvent delivery structure, the controller being configured for controlling the first reactant delivery structure to introduce a reactant required to produce a first desired product into the reactor for a period of time sufficient to produce a desired quantity of the first desired product, for controlling the solvent delivery structure to flush the reactor with the solvent after the desired quantity of the first desired product has been produced; and for repeating the previous two steps for each

additional reactant required to produce an additional desired product, such that a volume of solvent separates each different desired product discharged from the reactor to produce the substance library of different desired chemical products, such that a flow of fluid discharged from the reactor comprises different desired chemical products separated by the solvent, as recited in claim 29.

The prior art fails to teach or fairly suggest a reactor, a first reactant delivery structure, a solvent delivery structure, an output valve, a detector and a controller connected to the first reactant delivery structure, to the solvent delivery structure, to the output valve and to the detector, the controller being configured for controlling the first reactant delivery structure to introduce each reactant required to produce chemical products in a desired order, for controlling the solvent delivery structure to flush the reactor, and for controlling the state of the output valve based on the signal provided by the detector, such that when the signal from the detector indicates that a solvent is being discharged from the reactor module, the output valve is placed in fluid communication with the spent solvent collection volume, and when the signal from the detector indicates that a solvent is not being discharged from the reactor, the output valve is placed in fluid communication with a product collector, as recited in claim 30.

2. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance." Any inquiry concerning this communication or earlier communications from the examiner should be directed
